

VOLTAGE MATTERS!

Many doctors are now discovering that micro-current therapy is a great help in avoiding and treating diseases and pain. The reason is that low voltage, low pH and low oxygen are implicit in the disease process and increased voltage, increased pH and increased oxygen are all needed for successful treatment.

Doctors of Nutripathy® have known this since 1976. That is 40 years ago! The conductivity reading (Salts) part of the Biological Immunity Analysis® (BIA®) is a convenient indicator of the voltage status of the body, but only if you are measuring it against the BIA® Balanced Salts number, not relative to the so-called "perfect reading" of 7.

Electricity is as important for powering your body as for powering your computer and other household appliances. Your body is composed of trillions of cells which produce electrical signals that run almost instantaneously through the body as nerve signals, controlling all bodily functions both conscious and unconscious.

Imagine the difference between driving your electric car after a night of recharging or after forgetting to charge the car. You are like an electric car in need of constant energy though this becomes more critical the more diseased and more fatigued you become. When you are in pain and sick with disease it is safe to assume your voltage is low, that you are deficient in electrons. Many times, voltage (electron) deficiency gets concentrated in one location, for example, a tumor or ulcer, and systemic treatments lack the power to penetrate.

By reducing the negative "Salts Gap" you are gradually chipping away at diseased organs or body parts with pure energy, with electrons, with voltage. Add increased oxygen and the restoration of the body's natural ability to eliminate the acidity and seeming miracles can happen. If your body can accept and hold enough voltage it can fire up the immune system, which needs all the voltage it can get when it has to battle disease.

Your body has a measurable voltage. The body is electric. Every organ in your body has its own measurable electromagnetic current, which can be measured. Electrocardiograms for the heart and electroencephalograms for the brain measure this current.

If the frequency and voltage of your body drops, disease sets in. This is why it is important to keep your voltage high. It is normal for the Salts Gap to go negative as we age or become fatigued. To restore wellness, keep the negative Salts gap to no more than 5 points. You must keep every organ/gland operating at 50mV or better at which point the body can utilize the electrons for healing. The mitochondria of your cells will eat the electrons alive and produce more ATP.

A Doctor of Nutripathy® works with the body chemistry in an effort to duplicate what is found in Nature -- a wide range of frequencies that are able to transfer energy to the cells by having the frequencies that will resonate with the various types of cells in the body. Thus, it is an effort to have the same effect as applying numerous amino acids, enzymes, essential oils, minerals or vitamins and not having to figure out which items are needed.

Cell replenishing with voltage is a safe, non-toxic way to help cells regain their electric field balance which should restore normal metabolism and revitalize the cells. The restoration is usually first noticed in the improved younger looking appearance of the skin.

What is your voltage? A [Hair Mineral Analysis](#) (HMA) can help you gain this knowledge. An even better way is to get a [BIA®](#), urine/saliva analysis, at your earliest convenience. Both of these analysis are non-medical in nature. The HMA uses hair to determine the mineral balance of the body. The BIA® is a soil analysis applied to the human body by testing urine & saliva. There are very few practitioners who fully understand these two wonderful modalities for restoring wellness to the body but the time and effort required to find one is well worth it.

Mineral levels in your body are an all-important factor for establishing overall wellness of the body. Everything comes from minerals. Minerals are the basic building blocks of the body. So go your minerals, so goes your body -- often ending up in a disease state when in reality it all started with improper mineral ratios that should have been noticed and corrected years earlier. Minerals are the FIRST domino. Most symptoms later in life are the result of unbalanced mineral ratios earlier in life. If your mineral ratios are out of balance, no amount of right anything is going to have a lasting effect until you fix those ratios. You cannot get this info from blood, urine or saliva. For example, the body will "rob Peter to pay Paul" for years to keep the blood normal. Blood is your lifeline. The body will rob from less critical areas to provide what the blood needs to remain normal. This may create symptoms, like the ones you are reporting, but they won't be life-threatening symptoms like it would be if your blood falls out of normal ranges. This is why you can feel terrible and still have a blood test that is "normal."

Please note that a Doctor of Nutripathy® is an unlicensed, unregulated profession based in American common-law and adheres to a faith-based wellness science. No attempt to diagnose, cure or prevent disease is ever accomplished. A Doctor of Nutripathy® has only one thing in mind -- the restoration of *wellness balance* by supporting the natural processes of the body. If you desire the services of someone who is licensed to diagnose, treat or prevent *disease* then you should seek a licensed chiropractic, medical or naturopathic practitioner.
